

水陸間的律動織網：基於環境參數驅動的異質介面縫補策略

The rhythmic weaving of nets between land and water

摘要-Summary

淡水河堤作為城市邊緣，其生硬的垂直構造形成了人與水體間的「感知空白」與空間斷層。本設計旨在尋找這段被忽視的空白，將這道屏障視為「基地縫補」的起點。透過一組轉化河水力的動力裝置，我將斷裂的水陸界面重新編織成連續的感官場域。藉由捕捉無形的河水動能變化，將自然現象轉譯為豐富的「聲音層次」，打破過往單一的視覺享受。這場介入不僅豐富了人們對環境紋理與自然力的觀察，更讓人們在漫步夕陽時，透過感官疊加重新定義人、建築與河流之間的共生界線。

The rigid Tamsui embankment creates a "perceptual void" between the city and its water. This design treats this barrier as a starting point for "site stitching," using hydraulic kinetic installations to reweave the fractured interface into a continuous sensory field. By translating river energy into rich "sonic layers," the project transcends purely visual experiences. As people wander at sunset, these sensory layers allow them to redefine the symbiotic boundaries between humanity, architecture, and the river.

設計操作說明

本設計轉譯手遊《Block Blast》的補位邏輯，提出「聲音縫補」的空間策略。將裝置定義為陸地伸向河流的「感官觸手」。透過捕捉水流與波浪的合力動態，與河水展開一場「划水對話」，以物理拍擊聲填補陸地與水體間的感知真空。藉由參數實驗，構築出豐富的聲響層次。接著將水面的縫補過程轉譯為視覺信號傳遞回陸地。裝置隨浪潮起伏的物理動態，讓行人不只能聽見河流呼吸，更能看見能量流動，成功賦予土地生命力，讓陸地與河流進行深度對話。最終，將日常散步昇華為一場與自然環境共鳴的多維度感官體驗。

Inspired by the game Block Blast, my design uses "sound patching" to bridge the gap between the land and the river. I created these "sensory tentacles" that attach to railings and move with the water's energy. By catching the force of the waves, these devices start a "rowing dialogue" with the river, using rhythmic sounds to fill the empty space at the waterfront. I tweaked the settings for each unit to create a rich, layered soundtrack along the path.

The best part is how this movement sends visual signals back to the land. You don't just hear the river "breathing"—you actually see the energy moving. This contrast between the still ground and the moving sounds makes the land feel alive. It turns a simple stroll into a deep, multi-sensory connection with nature.
